

Exhibit 1. The last thirty days: five events, one direction

Each event moves a named P&L line. Dated, sourced, nothing inferred.

Date	Event	P&L line it moves	Source
15 Sep 2026	UPI merchant fee returns: 0.4% above Rs 2,000, capped at Rs 300, from 15 Oct	F1 revenue: a toll set by rule	NPCI FAQ; DFS
23 Sep 2026	IRDAI consultation proposes caps on distributor commissions and insurer expenses; PB Fintech falls 43% in four sessions	F3 revenue: commission is a regulated toll	IRDAI; Business Standard 29 Sep
Sep 2026	NPCI presents the Unified Agent Protocol and an AI-agent registry for UPI: 'AI may recommend, but authentication and final settlement must follow deterministic auditable rules'	F1 and AI: when the buyer is software, the licensed layer keeps the margin	Medianama; Inc42
25 Sep 2026	JSW One Platforms files a DRHP for a Rs 3,054 cr IPO, Rs 500 cr for its lending arm	F2: embedded credit inside a workflow	Business Today
1 Oct 2026	Moneyview lists 62% above issue after 98x subscription; cost of borrowings 14.44% in the DRHP	F2 and exits: the market pays for profit	Inc42; DRHP

What the numbers say

- Two of the five are the state resetting a toll: a 0.4% UPI merchant fee from 15 Oct, and IRDAI proposing caps on distributor commissions on 23 Sep.
- Two are capital arriving for licensed risk-holders: JSW One's Rs 500 cr for its lending arm and Moneyview's listing 62% above issue on a 14.44% cost of borrowings.
- One is the rail preparing for a software buyer: NPCI's agent protocol keeps authentication and settlement with the licensed layer.

How this reads on the P&L. Distribution margins are granted and withdrawn by rule and collected by licensed players at scale. The margin that survives a rule change is the one earned by holding the risk: the loan, the policy, the claim. Judge every company by which of the two it earns.

Sources: NPCI FAQ 15 Sep 2026; IRDAI consultation 23 Sep 2026 and Business Standard 29 Sep 2026; Medianama Sep 2026; Business Today 25 Sep 2026; Inc42 1 Oct 2026 and Moneyview DRHP. Workbook: JSW_R2_workbook_v7.xlsx.

Exhibit 2. The UPI merchant fee by ticket size: 0.4% between Rs 2,000 and Rs 75,000, then falling

Pure arithmetic off the NPCI rule (rate, floor, cap). The average UPI ticket pays nothing.

Effective fee as a share of payment value, with the fee in rupees

Ticket	Fee	Effective rate
Rs 1,999	Rs 0	0.00%
Rs 2,000	Rs 0	0.00%
Rs 5,000	Rs 20	0.40%
Rs 10,000	Rs 40	0.40%
Rs 25,000	Rs 100	0.40%
Rs 50,000	Rs 200	0.40%
Rs 75,000	Rs 300	0.40%
Rs 1,50,000	Rs 300	0.20%
Rs 3,00,000	Rs 300	0.10%

What the numbers say

- MDR is 0.4% only above Rs 2,000, capped at Rs 300; the cap binds at Rs 75,000.
- The average UPI ticket in September 2026 was Rs 1,220 (NPCI value over count), below the floor.
- NPCI: more than 95% of merchant transactions are at or below Rs 2,000 and pay nothing.
- Notified categories (railways, telecom, insurance, fuel) pay a flat Rs 5 above Rs 2,000 (secondary report).
- Who receives the 0.4% is not published; the acquiring side's share is an assumption of 40% (range 30 to 50%).

How this reads on the P&L. Revenue line: a toll on a minority of merchant payments, largest in percentage terms between Rs 2,000 and Rs 75,000 (school fees, clinics, durables, auto service, small B2B invoices). On a Rs 10,000 payment the fee is Rs 40 and the acquirer keeps an assumed Rs 16. Sell the software to these merchants; the rail is the wedge, not the business.

Exhibit 3. The lender ladder: a new lender loses about 5% of assets a year until two lines move

Yield, less cost of funds, less credit cost, less operating cost, equals return on assets. Listed figures are FY26 anchors; the new lender is an assumption with ranges.

Lender	Yield	Cost of funds	Credit cost	Opex to assets	Return on assets
Bajaj Finance (AAA)	18.0%	7.5%	2.0%	3.2%	5.2%
Small-ticket listed lender	26.0%	10.2%	2.5%	8.0%	5.3%
Pre-Series A lender, year one	23.0%	13.5%	4.5%	10.0%	-5.0%
Pre-Series A at the thresholds	23.0%	12.0%	2.5%	4.0%	4.5%

Return on assets, four cases

What the numbers say

- Bajaj Finance borrows at 7.54% (FY26); Moneyview at 14.44% (DRHP, FY25 and 9M FY26). The gap is 6.9% and it is the rating.
- Year-one return on the new lender's book: -5.0% at the midpoints, -13.0% to 3.0% across the ranges.
- Rs 15 cr of equity supports a Rs 68 cr own book at 3.5x debt, or Rs 675 cr co-lent with the originator holding 10% (RBI directions, 1 Jan 2026; default loss guarantee capped at 5%).
- Navi lost 3.6% of its Rs 13,000 cr book in FY26; slice, now a bank, made over Rs 50 cr in Q1 FY27.

How this reads on the P&L. The lender bet is a capital-stack bet. The year-one loss is the cost of building a book; the test is whether cost of funds gets under 12% and operating cost under 4% of assets by year three with credit cost under 2.5% on a 12-month vintage. At those thresholds the same yield earns 4.5%. The first Rs 100 cr of debt, contracted at entry, decides mortality more than the asset class does.

Exhibit 4. The public market prices profit: 2025 to 2026 fintech listings against issue price

Blue above issue, red below. Profit in the latest quarter beside each name.

What the numbers say

- Groww: Rs 735 cr of profit in Q1 FY27, 86% above issue.
- Pine Labs: Rs 20 cr of profit in Q1 FY27, -22% against issue.
- Turtlemint, a distributor: listed -11% on day one and -36% by late September after IRDAI's commission paper; PB Fintech fell 43% in four sessions on Rs 163 cr of quarterly profit.
- Moneyview listed 62% up after 98x subscription on a 14.44% cost of borrowings.
- Early-stage fintech funding was USD 367 mn in H1 2026 and seed USD 68.6 mn (Tracxn); pre-Series A is underfunded.

How this reads on the P&L. Exit line: the Indian IPO is the exit, and it prices profit after tax, not growth. Every thesis therefore names the profit a company needs by year six or seven, and a distributor's profit is now exposed to a rule. Strategic buyers exist (Groww bought Fisdom for USD 150 mn; Perfios bought three companies in 2025) but pay less.

Exhibit 5. The regulatory calendar, Sep 2025 to May 2027: eleven dated rules and the P&L line each moves

Effective dates from the issuing body or one business daily. A rule that creates a budget is the revenue test for F5 and AL4.

Effective	Rule	Issuer	P&L line it moves
22 Sep 2025	GST on individual life and health premiums to zero	Government	F3 revenue: premium growth +29.7% in Oct-Mar FY26
1 Jan 2026	RBI co-lending directions in force: 10% retention, 5% default loss guarantee cap	RBI	F2 capital stack
5 Feb 2026	100% FDI in insurance in force	Government	F3 carriers capitalised
1 Apr 2026	RBI gold loan directions in force; STT raised on F&O; SEBI MF Regulations 2026 cut brokerage caps	RBI; Government; SEBI	F2 gold; F4 broking and distribution margins
24 Jun 2026	RBI draft model-risk guidance applies FREE-AI to AI models; RBI fraud liability directions final	RBI	AL4 and F5 budgets
4 Aug 2026	Supreme Court orders a mule-account procedure; RBI draft follows on 11 Sep	SC; RBI	F5 fraud budget
15 Oct 2026	UPI MDR effective	NPCI	F1 revenue
25 Oct 2026	IRDAI consultation comments close	IRDAI	F3 distributor revenue
13 Nov 2026	DPDP consent managers register	MeitY	F5 consent infrastructure
1 Jan 2027	Banks compensate 85% of coerced-transaction losses up to Rs 25,000	RBI	F5 fraud detection budget
13 May 2027	DPDP full obligations apply	MeitY	F5 compliance budget

What the numbers say

- Three rules create a fraud and compliance budget on a date: bank liability for 85% of coerced-transaction losses up to Rs 25,000 from 1 Jan 2027; DPDP consent managers from 13 Nov 2026 and full obligations from 13 May 2027; the mule-account procedure.
- Two rules compress a distribution margin: UPI MDR by cap and floor; IRDAI's proposed commission caps.
- One rule codifies the lender's capital stack: co-lending from 1 Jan 2026.
- Only 20.8% of RBI-regulated entities were using or building AI in the 2025 survey, so the budget needs a rule to exist.

How this reads on the P&L. Where a rule names a date, the buyer's budget appears on that date; a tool bought only after an incident has no steady revenue. The companies to back in F5 and AL4 are the ones whose module a regulated entity must have on the date in the calendar.

Sources: RBI, SEBI, IRDAI, NPCI, MeitY and PIB releases; Business Standard, Lexology and Cyril Amarchand summaries as listed in Inputs F4 to F6, L19, L20, W13, W14, P1 to P3. Workbook: JSW_R2_workbook_v7.xlsx.

Exhibit 6. Vendor or owner: per-outcome prices against an Indian call's cost

Prices converted at an assumed Rs 87 per USD. A success fee is a vendor's price; a loss is an owner's.

Rupees per conversation or call

What the numbers say

- A human call in India costs Rs 13.8 at the midpoint (range Rs 7.6 to Rs 25.6): an agent at Rs 35,000 a month handling 115 calls a day.
- An AI call costs Rs 2.74: 4,000 tokens at USD 0.68 per million plus Rs 2.5 of telephony and speech.
- So the price room for an Indian voice vendor is Rs 5 to Rs 12 per resolved call, against USD 0.99 (Rs 86) at Intercom. Gross margin at Rs 8: 66%.
- SquadStack moved to a success fee on disbursed loans for DMI Finance (CIOL, 14 Sep 2026); if the loans go bad, the loss sits with DMI. Stellaris: 66% of 216 voice AI companies target an existing budget.

How this reads on the P&L. Efficiency is the floor: an AI call at under Rs 3 against a human call at Rs 8 to 25 is a saving the buyer captures, and India's cheap calls leave a thin price room. The business that earns the margin through a cycle is the one that holds the outcome on its own account: the lender using the agent and holding the loan, not the vendor paid per call. The balance sheet shows which one a company is.

Sources: A1: Assumption; Teamlease or Nasscom wage data are the check (assumption, range 25000 to 45000); A2: Assumption (assumption, range 80 to 150); A4: Ramp AI Index, Sept 2026, 2026-09-09; A5: Assumption (assumption, range 2000 to 6000); A6: Assumption; CPaaS and speech-to-text price lists are the check (assumption, range 1 to 4); A7: Assumption; replace with RBI reference rate on build day (assumption, range 85 to 90); A8: Assumption; must sit below the human cost per call (Rs 8 to 25) for the buyer to save (assumption, range 5 to 12); A9: Intercom pricing page, 2026-10; A10: Salesforce pricing page, 2026-10; A11: Salesforce pricing page, 2026-10; A12: Estimate reported in press; Sierra does not publish, 2026 (assumption, range 1 to 2); A14: Stellaris Venture Partners, Voice AI thesis, 2026 Workbook: JSW_R2_workbook_v7.xlsx.

Exhibit 7. What the fund needs from each name: 3x on every company, or six at 5 to 8x and no zeros

Only the Mint facts about JSW Ventures, then arithmetic. Nothing else is assumed about the fund.

Fund III target,
midpoint

Rs 450 cr

Mint, 25 Jun 2026; not
yet closed

Names

15

14 to 16

Per name over life

Rs 30 cr

initial plus equal reserve

Needed back for 3x

**Rs 1,350
cr**

on the midpoint target

Multiple on every name for 3x

3.0x

if no zeros, reserves fully drawn

Reading

Three zeros, six names at 1 to 2x and six at 5 to 8x return about 3.2x on a Rs 450 cr fund with Rs 30 cr per name. The fund described needs low mortality and six mid-single-digit multiples, which is the profile of licensed risk-holders run by software; it does not need a 30x.

What the numbers say

- Initial cheque Rs 10 to 20 cr with an equal reserve; pre-Series A to Series A+.
- Fintech early-stage funding was USD 367 mn in H1 2026 and seed USD 68.6 mn (Tracxn), so a Rs 15 cr lead cheque sets price in a thin market.
- Fund I returned about 3x per Mint; the Purple sale was reported at 2.7x the Fund I corpus (Entracker, 2023). [verify before quoting]

How this reads on the P&L. Portfolio line: at Rs 30 cr per name over life and a 3x target, a company must return Rs 90 cr to carry its own weight. A software-run lender listing on Rs 80 to 150 cr of PAT at 15 to 25x returns 5 to 8x on JSW's diluted stake; the 10x candidates are the infrastructure suppliers with pricing power in F5.
